

(HEAT) - HMMWV Egress Assistance Trainer

The Precision Products' HMMWV Egress Assistance Trainer (HEAT) is the safest, most realistic rollover training tool available for soldiers. The HEAT is designed to replicate in-theater operations while facilitating a controlled and safe environment. It provides training for emergency evacuation, self aid, buddy care and injured personnel removal in the event a vehicle becomes inverted or rolled on its side.

Survivability ratings of troops improve dramatically as training evolves and experience is developed, leading soldiers to gain high levels of confidence in their ability to respond automatically to inverted emergencies, whether under water, under fire, or on fire.

Accurate Rollover Simulation

Multiple Safety Interfaces

Controlled 360 Degree Rotation

Adjustable Speed

Brake Controlled Axle

Quiet/Durable Hydraulic Motors

Low Maintenance, High-Precision Bearings and Gearbox

Static or Mobile Mount

Rigid Steel Construction

Safety Strut Walkways

Additional Options and Features Available

HEAT training is critical to saving lives and reducing injuries in what has become increasingly common inverted vehicle emergencies. This exercise alleviates the panic resulting from these extremely disorienting rollover events and soldiers practice the proper procedures until they truly become second-nature. HEAT simulation prepares troops in-theater for a potential rollover, thus honing all the skills required to exit the vehicle quickly and safely.
